

# Tankless Is Green

## WHAT IS OUR NEW TECHNOLOGY?

Noritz is the No. 1 manufacturer of tankless water heaters and the leader in tankless technology. Noritz offers the widest model selection to meet all applications. Noritz units are equipped with commercial grade copper heat exchangers for both residential and commercial models, which is 25% thicker than others and increases durability.

Noritz also offers the industry's first dual flame burner, which is extremely efficient and provides stable combustion over a wide range of water flow. This translates to temperature stability with a faster recovery rate.

Noritz recently added two more great products to its product line: Condensing 8.4gpm and Concentric venting option to the popular 7.5gpm residential model. The condensing unit is now 93% efficient (typical tankless is 84%), with a dual heat exchanger and a built-in neutralizer. It is so efficient, that it received an Energy Star rating. The Concentric venting option is now zero clearance, which makes installation even more flexible!

## WHAT SETS US APART?

All of Noritz's tankless water heaters are energy efficient, which helps you cut down on your monthly water heating costs; it is definitely a benefit in this inflated economy.

Noritz's gas-operated tankless water heater is more cost-effective when compared to an electric or gas tank water heater, and produces less carbon monoxide which helps the reversal of global warming. The tankless water heaters by Noritz lasts longer than a regular tank heater and all the parts are interchangeable, which dramatically reduces the amount of waste in landfills. A residential Noritz unit is the size of a carry-on suitcase, and can be installed virtually anywhere in the house; you are left with more space for other needs.

Noritz units are also intelligent and can be linked up to 24 units using a single controller to maximize the flow to meet any demands – the most in the industry.

## WILL IT SELL?

Noritz America has been in the U.S. since 2002 and has seen tremendous expansion and will continue to grow at a rapid rate every year. Starting with a single office in California, we have now expanded to all major regions of U.S.: Dallas, Chicago, Atlanta and New York.

Our California headquarters houses a beautiful showroom and is the central logistic center. Many local installers have also taken the initiative of remodeling their showrooms to showcase Noritz's finest products.

Although we are considered the latecomers to the U.S. versus other major tankless manufacturers, Noritz was the first to receive the prestigious ASME code symbol in all of our commercial models. Noritz products are also certified by NSF and CSA and continues to work closely with these organizations to bring the finest and safest products to our customers. Noritz is proud to be the leader in the tankless industry worldwide.
